

## Talquin Electric Cooperative's Procedures for Reconnecting Electric Services after Storm Damage

In the event of storm damage affecting the reconnection of electric services within our service territory, Talquin Electric has established the following procedures to ensure timely and safe restoration of power:

- **Damage to the Service Conductors Disconnected from Structure:** If the service conductors are disconnected due to damage to the mast only (with no other damage to the meter base or structure), Talquin Electric will reconnect the service. A permit or inspection from the county or city is not required in this situation.
- **Damage to the Meter Base and/or Damage to House/Building:** If the meter base is damaged and requires replacement or if the house/building has sustained structural damage from trees, debris, or other damage, a permit and inspection will be required by the respective Building Inspection Divisions (city or county).
  - If the permitting system is unavailable, please email the appropriate county officials or call the county's on-call inspection line. Provide the address and scope of work for the repair.
  - Once the permitting system is back online, you must obtain a permit. After the inspection is completed and approved, the Building Inspection Division will send a release to Talquin Electric to reconnect the service and the work will be completed as soon as possible. Reconnections may be delayed due to power restoration efforts.

These procedures are in place to ensure the safety of Members.
